<u>Web Pages W3C Accessibility Guidelines</u>

<u>W3C Guidelines principles</u>

Perceivable: information should be presented in a way that is perceivable by any use. This was done in this assignment by dividing text into sections using header tags so it's easier to identify.

Operable: The webpage should be easy to navigate. This was done by adding a website title using the TITLE tag

Understandable: The information and user interface navigation need to be understandable. This was done by adding more pages on the website and having an anchor tag and a button tag to navigate back to home page.

Robust: The website is viewable by multiple browsers and assistive technology. This was done by using validator.w3.org to ensure the website is accessible
